

Claymark Solid Gold™ Protected Trim Boards

Solid Gold Protection Technology

Solid Gold utilizes the Tru-Core process – the most advanced wood preservative system in the world.

- Unique carrier system penetrates microscopic channels in resins and glues
- 100% penetration of the Sapwood and Heartwood
- No damage to the wood structure
- No volatile organic solvents or harmful chemicals!
- 3 EPA registered and globally recognized fungicides
- 2 EPA registered and globally recognized termiticides

Solid Gold and Tru-Core 4 Dimensions of Protection (Diagram box)

- Carrier, Penetrant and Fixation Chemistry
- Boron – Double the concentration proven effective in 50+ years of use
- 5 Decay and Termite Actives
- Performance Synergy

Solid Gold Protection Process offers the following key benefits:

- 50 year warranty against Decay, Rot & Termites (including Formosan)
- Solid Gold is FSC® Certified – eligible for LEED points
- Durable and safe for both exterior and interior application
- No wood preservative field treatment needed on cut surface ends or drilled holes. Eliminates extra work in the field!

New Generation Sealer

- Resists water uptake
- Resists resin/tanin bleed
- 100% Solids eco friendly technology
- UV cured seal coat

100% Acrylic Primer & Undercoat

Solid Gold primer system utilizes new generation Acrylic technology

- Waterborne technology
- 100% Acrylic composition
- All 4 sides are evenly coated
- Solid Gold has a 5 Year Limited Primer Warranty

50 Year Limited Warranty

Solid Gold products have an industry-leading 50 Year Limited Warranty against any fungal decay/rot and insect attack (including Formosan termites).

The same components used in Solid Gold are used by 90% of North American Window companies to protect windows!
